SUMMARY

Full Stack Software Engineer with 5+ years of experience building scalable web applications, RESTful APIs, and microservices using Java, Spring Boot, Python, and React. Experienced in delivering across the full stack in cloud-native environments (AWS, OpenShift), with a strong foundation in Agile development, testing, and CI/CD practices. Passionate about writing clean, maintainable code and contributing to teams that build meaningful software — including hands-on experience in higher education platforms serving thousands of students.

WORK EXPERIENCE

Colorado Community College System

Sr Full Stack Developer

Aurora, CO

July 2023 – Present

- Developed and designed robust system components in an Agile environment, using TDD and pair programming.
- Built user-friendly web applications using React, focusing on component-based design and efficient state management.
- Leveraged ES6 features and React design patterns like Hooks, and Higher-Order Components.
- Integrated React Query to improve data fetching, reducing API request times by 30%.
- Improved overall application performance by 45% through efficient caching and query management.
- Used React.lazy and Suspense for lazy loading and code splitting to boost performance, and integrated Error Boundaries.
- Optimized application state management by implementing Redux and Context API, maximizing efficiency.
- Developed automated test suites using Jest, React Testing Library, and Playwright to validate functionality and improve user experience.
- Developed and maintained web applications using the Grails framework, implementing core features and ensuring security, and optimal performance.
- Led backend modernization initiative migrating legacy Grails applications to a FastAPI and React stack, improving scalability, reducing response times, and delivering a more maintainable codebase for a system serving thousands of students statewide.
- Proficient in Oracle SQL, adept at writing queries and procedures for effective data manipulation and retrieval.
- Enhanced system efficiency by integrating Redis for caching, minimizing database load and accelerating response times.
- Deployed and optimized FastAPI applications on OpenShift, managing pods for scalable performance and utilizing centralized logging to monitor, troubleshoot, and enhance application reliability and response times.
- Integrated Elastic Stack (ELK) for centralized observability, enabling real-time log monitoring, alerting, and performance diagnostics across deployed services on OpenShift.
- Utilized JMeter to recreate heavy traffic scenarios, find performance issues, and optimize the application's scalability while doing load testing.
- Managed the SDLC, including release management, to ensure smooth and timely software releases.
- Managed Git repositories and analyzed defects to improve code quality and system scalability in CI/CD environments.
- Mentored junior and mid-level engineers through structured code reviews, architectural walkthroughs, and pair programming sessions, elevating team code quality and accelerating onboarding.
- Led technical design discussions and drove alignment between engineering, product, and business stakeholders to ensure solutions met both technical and organizational needs.
- Documented APIs and technical processes, improving team collaboration, and code quality.

Infosys Limited

Systems Engineer

Bengaluru, India

Jan 2020 – Dec 2021

- Used Agile with TDD for efficient product development, involving backlog refinement, daily scrums, and customer inputs.
- Engineered reusable React components using Material UI and Bootstrap, including forms, cards, and modals.
- Built and delivered RESTful APIs using Spring Boot and contributed to Angular-based frontend components, gaining hands-on experience with Angular modules, services, and component architecture in an enterprise codebase.
- Used Apache Kafka for distributed messaging among REST APIs, reducing message latency by 30%.
- Used JDBC to connect to Oracle DB, leveraging PL/SQL to write stored procedures and functions.
- Designed and implemented AWS solutions, including EC2, S3, and RDS, enhancing scalability and reducing costs by 30%.
- Established efficient build and deployment pipelines utilizing CI/CD processes and tools such as Git, Maven, and Jenkins.

EDUCATION

University of Central Missouri
MS in Computer Science

Jan 2022 – May 2023
GPA: 3.70

TECHNICAL SKILLS

- **Programming Languages:** Java, Python, C
- **Frontend Technologies:** React, JavaScript, HTML/CSS, TypeScript; familiar with Angular
- **Backend Technologies:** Spring Boot, Grails, Node.js, Express.js, FastAPI, Spring MVC
- **Databases:** Oracle SQL, MongoDB, Redis
- **Testing & Tools:** JUnit, Jest, JMeter, Puppeteer, Insomnia, Postman, Bruno
- **DevOps & Cloud:** Docker, Kubernetes, AWS, OpenShift, Elastic Stack (ELK), log4j
- **Other Technologies:** Microservices, Apache Kafka, Maven, Shell Scripting, Jira, Git, SVN
